

## Requirements

- Implement a Spark streaming program that counts the number of lines containing the word “FATAL” and keeps reporting it on console.

Tip: How to stream the word 'FATAL'?

- Start a terminal window
  - Type: nc -lk 9999
  - key the word 'FATAL' several times and check it is being counted.
- Implement a Spark Streaming program that watches for a local directory changes. It should notify when a new file is added, when line count of greater than 10.
